

RAR Consulting

RISK · INSURANCE · STRATEGIC RESILIENCE

PLATFORM UPDATE · AUGUST 2026

Building the RAR Consulting Risk Platform

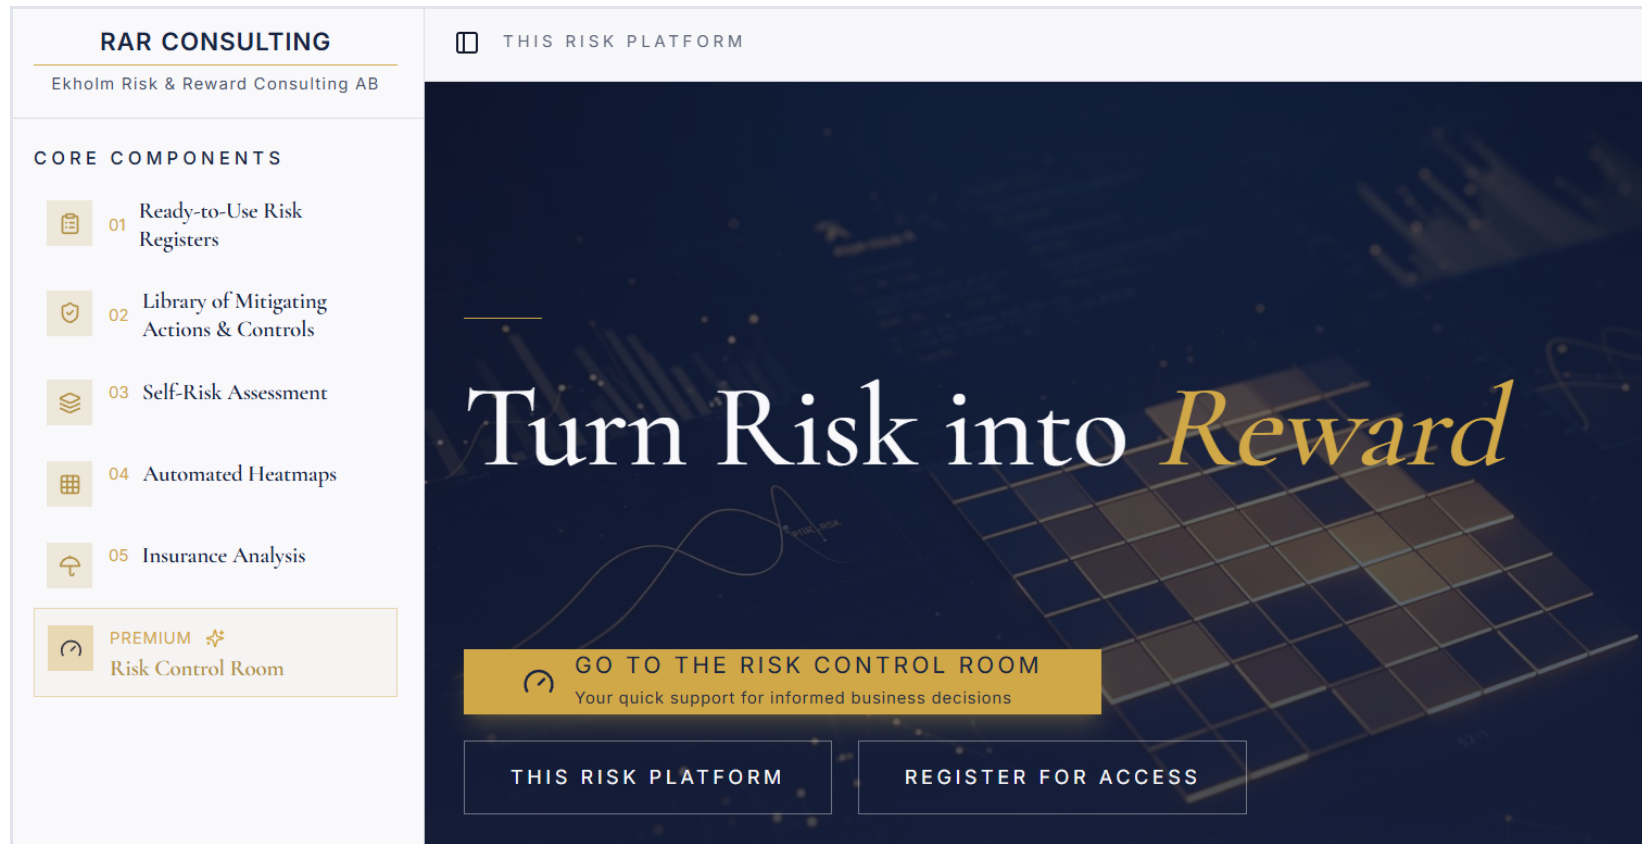

Development progress

Five core components designed to cut manual effort and give organisations faster, clearer and more actionable insight for informed decision-making.

By Emelie Ekholm · Senior Insurance & Risk Management Leader

SNEAK PEEK

A first look at the platform

Ready-to-use risk registers

A structured library of benchmarkable risk scenarios is now in place, giving organisations a ready-made starting point instead of building risk definitions from scratch. This improves consistency and accelerates onboarding.

Library of mitigating actions and controls

Hundreds of mitigating actions and controls, aligned with common risk categories, so users can quickly identify practical measures to strengthen resilience and close gaps.

Self-risk assessment

A complete self-assessment workflow that automatically generates an Executive Risk Report, a consolidated, decision-ready overview of exposures, trends and priorities.

Automated risk heatmaps

Presentation-ready heatmaps generated from your own inputs. No manual formatting, just clear visualisation for reporting and decision-making.

Insurance analysis

Assessed risks are connected directly to insurance exposures and considerations, supporting data-driven discussions with brokers and insurers and strengthening the link between ERM and risk transfer.

An exclusive early-adopter offer

Registration for early users opens soon. Instead of a standard monthly subscription, early users are offered a one-time monthly fee granting lifetime premium access to all current and future platform functionality.

This is an exclusive early-adopter offer for organisations that want to help shape the next generation of risk management tooling.
